G. Ben Turnipseed Engineers, Inc. was established in 1978 and has specialized in the planning, permitting, technical design and construction administration of water and sewerage system projects for small to medium size cities and counties throughout Georgia. As founder and principal-in-charge of all water and wastewater projects completed by the firm, Ben Turnipseed has been personally responsible for the design of more than 80 water and wastewater plants.

The firm has eight Professional Engineers and three Engineers-In-Training, including Ben Turnipseed, Jr. who joined the firm in 2009 and is involved in design and construction management of ongoing projects involving elevated water tanks, water line replacement, water line construction, sewer rehabilitation and water pollution control plant design. With more than 35 employees the firm provides strong design, technical and administrative teams who understand the importance of providing the highest quality of engineering services to cities, counties and authorities throughout Georgia.

The firm's headquarters is located in northwest Atlanta near I-75 and I-285 in a 7,500 square foot building and has a fully staffed branch office in Augusta. The firm is a member of and actively participates in the Georgia Rural Water Association, National Rural Water Association, Georgia Association of Water Professionals, Water Environment Federation, Georgia Municipal Association, American Waterworks Association, Consulting Engineers Council of Georgia, and American Consulting Engineers Council. ●
